

Parma Community General Hospital  
**PARAMEDIC PROTOCOL**

*Protocol*

**Multiple Chemical Sensitivity**

Multiple Chemical Sensitivity (MCS) is a recognized condition characterized by extreme allergic reactions to environmental triggers, usually brought on by exposure to chemicals or toxins. This disease is debilitating and potentially life threatening.

1. When treating or encountering patients with Multiple Chemical Sensitivity, who experience extreme reactions to known allergens, those medications and medical supplies are to be avoided.
2. If the patient is unconscious or in extremis, the appropriate protocol is to be followed.
